

In the Claims:

1. (Currently Amended) An image decoding apparatus ~~provided with a decoding device which decodes the input coded data of an image for generating an image data,~~ comprising:

a decoding device for converting input image coded data for generating and outputting image data by decoding said image coded data;

a memory device for storing decoded image data generated by said decoding device;

first to N-th₂ (N is being an integer ~~more than 2 or more~~), image format conversion devices for generating ~~and outputting~~ first to N-th images after by converting said decoded image data read from the memory device into respective predetermined image formats determined by input filter parameters, and outputting said first to N-th images in synchrony with input first to N-th vertical image synchronizing signals which are synchronized with each other.

2. (Currently Amended) An image decoding apparatus comprising:

first to N-th decoding devices which convert input first to N-th image coded data for generating and outputting first to N-th image data by decoding said first to N-th image coded data;

a memory device for storing said first to N-th image data generated by respective decoding devices;

first to N-th image format conversion devices for generating ~~and outputting~~ first to N-th ~~image images~~ data by converting any of said image data from among said first to N-th image data read from the memory device into respective predetermined image formats determined by input filter parameters, and outputting said first to N-th images in synchrony with input first to N-th vertical image synchronizing signals which are synchronized with each other.

3. (Currently Amended) An image decoding apparatus according to claim 2, wherein the image decoding apparatus comprises a distribution control apparatus for distributing any of the image data among said first to N-th image data respectively to first to

N-th image format conversion devices, in response to a request of said first to N-th image format conversion device.

4. (Cancelled)

5. (Currently Amended) An image decoding apparatus according to claim 1, wherein the image decoding apparatus further comprises:

an image synchronizing signal generation device for generating and outputting ~~a~~the first vertical image synchronizing signal used for outputting said image by any one of the image format conversion devices ~~device~~ among said first to N-th image format conversion devices; and

C1 cont'd
first to M-th, (M: being an integer equal to N-1), image synchronizing signal generating and synchronization adjusting devices for generating and outputting the second to the N-th vertical image synchronizing signals respectively in synchronization with said first vertical image synchronizing signal used for outputting said images by said image format conversion devices other than said one of the image format conversion device.

6. (Original) An image decoding apparatus according to claim 5, wherein said first to M-th image synchronizing signal generating and synchronization adjusting devices comprise:

a counter for generating any one of said second to N-th vertical image synchronizing signals generated and output respectively by said first to M-th image synchronizing signal generating and synchronization adjusting devices; and

a counter control device for controlling the operation of said counter based on said first vertical image synchronizing signal.

7. (Cancelled)

8. (Cancelled)

9. (Currently Amended) A semiconductor device comprising:

a decoding device for generating ~~an~~ image data by decoding input image coded data, and for storing the thus generated image data in ~~an externally installed~~ a memory device;

a decoded data reading device for reading said image data stored in said memory device in response to an inputting decoded data request signal and for outputting said image data as ~~the~~ decoded data signal;

~~an image synchronizing signal generation device for generating and outputting a first horizontal image synchronizing signal and a first vertical image synchronizing signal;~~

~~an image synchronizing signal generating and synchronization adjusting device for generating and outputting a second horizontal image synchronizing signal and a second vertical image synchronizing signal, which is synchronized with said first vertical image synchronizing signal;~~

could
a first image format conversion device for generating a first image by converting said ~~input~~ decoded data signal into a predetermined image format determined by an input first filter parameter, and for outputting said first image ~~after synchronizing in synchrony~~ with said ~~first horizontal image synchronizing signal and said an input~~ first vertical image synchronizing signal; and

a second image format conversion device for generating a second image by converting said ~~inputting~~ decoded data signal into a predetermined image format determined by an input second filter parameter, and for outputting said second image ~~after synchronizing in synchrony~~ with said ~~second horizontal image synchronizing signal and said an input~~ second vertical image synchronizing signal which is synchronized with said first vertical image synchronizing signal.

10. (Currently Amended) A semiconductor device comprising:

a first decoding device for generating a first image data by decoding input first image coded data and for storing the generated first image data in ~~an externally installed~~ a memory device;

a second decoding device for generating a second image data by decoding an input second image coded data, and for storing the generated second image data in ~~an externally installed~~ the memory device;

a decoded data reading device for reading said first or second image data stored in said memory device in response to an inputting first decoded data request signal and for reading said first or second image data stored in said memory device in response to an inputting second decoded data request signal and for outputting ~~multiplexed decoded data prepared by multiplexing said first or and second image data;~~

a distribution control device for distributing said ~~multiplexed decoded signal first and second image data~~ to as a first decoded data signal corresponding to said first decoded data request signal and a second decoded data signal corresponding to said second decoded data request signal;

~~an image synchronizing signal generation device for generating a first horizontal image synchronizing signal and a first vertical image synchronizing signal;~~

C1 cont'd
~~an image synchronizing signal generating and synchronization adjusting device for generating and outputting a second horizontal image synchronizing signal and a second vertical image synchronizing signal;~~

a first image format conversion device, which outputs ~~a first~~ the first decoded data request signal for generating a first image by converting said ~~input first~~ first decoded data signal into a first predetermined image format determined by an input first filter parameter and for outputting said first image ~~after synchronizing in synchrony with said first horizontal image synchronizing signal and said an input first vertical image synchronizing signal;~~ and

a second image format conversion device which outputs ~~a second~~ the second decoded data request signal for generating a second image by converting said ~~inputting second~~ decoded data signal into a second predetermined image format determined by an input second parameter, and for outputting said second image ~~after synchronizing in synchrony with said second horizontal image synchronizing signal and said an input second vertical image synchronizing signal~~ which is synchronized with said first vertical image synchronizing signal.

11. (Cancelled)

12. (Currently Amended) An image decoding method for decoding an inputting image coded data and for generating an image data comprising the steps of:

~~generating a first horizontal image synchronizing signal and a first vertical image synchronizing signal;~~

~~generating a second horizontal image synchronizing signal and a second vertical image synchronizing signal which is synchronized with said first vertical image synchronizing signal;~~

~~generating a first image by converting said image data into a predetermined image format determined by an input first filter parameter and outputting the generated first image after synchronizing said first image in synchrony with said first horizontal image synchronizing signal and with said an input first vertical image synchronizing signal; and~~

~~generating a second image by converting said image data into a predetermined image format determined by an input second filter parameter and outputting the generated second image after synchronizing said second image in synchrony with said second horizontal image synchronizing signal and with said an input second vertical image synchronizing signal which is synchronized with said first vertical image synchronizing signal.~~

13. (Currently Amended) An image decoding method comprising:

generating a first image data by decoding an inputting first image coded data;

generating a second image data by decoding an inputting second image coded data;

controlling the distribution of said first and second image data to their request sources;

~~generating a first horizontal image synchronizing signal and a first vertical image synchronizing signal;~~

~~generating a second horizontal image synchronizing signal and a second vertical image synchronizing signal synchronized with said first vertical image synchronizing signal;~~

~~generating a first image from said requested first image data by converting into a predetermined image format determined by an input first filter parameter and outputting said first image after synchronizing said first image in synchrony with said first horizontal image synchronizing signal and said an input first vertical image synchronizing signal; and~~

~~generating a second image from said requested second image data by converting into a predetermined image format determined by an input second filter parameter and outputting said second image after synchronizing said second image in synchrony with said second~~

~~horizontal image synchronizing signal and said an input~~ second vertical image synchronizing signal which is synchronized with said first vertical image synchronizing signal.

14. (New) An image decoding apparatus according to claim 1, wherein said filter parameters are input to said first to N-th image format conversion devices in a predetermined period during which no decoded image data are input to said first to N-th image format conversion devices.

15. (New) An image decoding apparatus according to claim 14, wherein said filter parameters are multiplexed with said decoded image data, and the multiplexed data are input to said first to N-th image format conversion devices.

C1 contd
16. (New) An image decoding apparatus according to claim 15, wherein said filter parameters are input to said first to N-th image format conversion devices between the time said vertical image synchronizing signals are input to said first to N-th image format conversion devices and the time said decoded image data are input to said first to N-th image format conversion devices.

17. (New) An image decoding apparatus according to claim 14, wherein said vertical image synchronizing signals are input to said first to N-th image format conversion devices at the same phase.

18. (New) An image decoding apparatus according to claim 14, wherein said respective filter parameters are input to said first to N-th image format conversion devices in synchrony with said vertical image synchronizing signals corresponding thereto.

19. (New) An image decoding apparatus according to claim 1, wherein said input image coded data is coded bit stream in MPEG form.

20. (New) An image decoding apparatus according to claim 2, wherein said filter parameters are input to said first to N-th image format conversion devices in a predetermined

period during which no image data are input to said first to N-th image format conversion devices.

21. (New) An image decoding apparatus according to claim 20, wherein said filter parameters are multiplexed with said image data, and the multiplexed data are input to respective first to N-th image format conversion devices.

*C1
cancel.*
22. (New) An image decoding apparatus according to claim 21, wherein said filter parameters are input to said first to N-th image format conversion devices between the time said vertical image synchronizing signals are input to said first to N-th image format conversion devices and the time said image data are input to said first to N-th image format conversion devices.

23. (New) An image decoding apparatus according to claim 20, wherein said vertical image synchronizing signals are input to said first to N-th image format conversion devices at the same phase.

24. (New) An image decoding apparatus according to claim 20, wherein said respective filter parameters are input to said first to N-th image format conversion devices in synchrony with said vertical image synchronizing signals corresponding thereto.

25. (New) An image decoding apparatus according to claim 2, wherein said input first to N-th image coded data are coded bit stream in MPEG form.
